

## The Shrinkable Fabric™ for Superior Protection

### Your Powersports Storage Solution

Whether you store ATV's, motorcycles, snowmobiles or any other recreational products, you should consider using the high-quality, easy-to-use Transshield Storage Covers. These covers can save you time, money and provide the best protection available for indoor or outdoor storage for you or your customers. Transshield's patented three-layer material was developed to provide strength, reduce damage caused by abrasion or condensation. Plus, Transshield is reusable.

### Three Layers of Protection

Transshield's outer layer is a special UV-resistant polyethylene shrink stretch film, available in Bright White, Desert Tan or Olive Green. The middle layer is a solvent free hot-melt adhesive. The inner layer is a soft, non-woven, polyester material. The combination of these three products provides superior surface protection – even to Class A Automotive Finishes.

Plus, Transshield provides advanced vapor corrosion inhibitor delivery system (AAD-VCI) for superior corrosion resistance during storage.

### Easy and Convenient

Transshield is easy and quick to apply. These are custom-fit covers. Application takes only a few minutes. Simply install the cover, fix it to the product being covered and shrink it tightly. In most cases Transshield covers can also be reused and allow access to the product while in storage.

*Custom fit powersports covers for ideal protection.*

# Transshield... the best protection available.

*Easy to install.*

Unfold cover and put  
over unit to be covered.

Situate cover and  
tighten drawstring.
